

DESCRIPTION

The SureFire SF3P is the most effective flash hider ever developed. It is expertly engineered to virtually eliminate visible muzzle flash, typically reducing signature by more than 99% compared to a bare muzzle. That core performance remains the defining purpose of the SF3P, and the reason it is trusted by professionals worldwide.

Beyond its flash-hiding excellence, the SF3P's suppressor-mounting capability is anchored in SureFire's proprietary indexing architecture—a system of precisely machined, multi-bearing engagement surfaces that guides SOCOM Fast-Attach® suppressors into firm, repeatable alignment. This distributed geometry delivers reinforced mechanical consistency through heat, recoil, and high-volume firing. A rear labyrinth seal complements this architecture by limiting carbon collection in the Fast-Attach interface, helping preserve the integrity of the locking system and easing suppressor removal after extended use.

Precision-machined from U.S. mill-certified, heat-treated stainless steel, the SF3P is finished with a durable DLC coating for maximum protection in harsh environmental conditions and to facilitate cleaning, even after extreme use. It features robust tines built to withstand the rigors of combat. Precision-cut threads provide a consistent, secure barrel interface for reliable installation.

Each SF3P is individually inspected for concentricity and alignment and is backed by SureFire's No-Hassle Guarantee.

FEATURES

- Advanced design produces over 99% flash elimination
- Multiple bearing surfaces provide superior suppressor alignment
- Robust design helps prevent ringing of tines inside suppressor
- Labyrinth seals keep the rear mounting surface cleaner
- Serves as a mounting adapter for SureFire SOCOM Series Fast-Attach suppressors
